

PocketSmart – AI Workflow

Member Assignment – K. Fathima Halitha

1. Topic

Designing the AI workflow for PocketSmart

Epic: AI Workflow Development

2. Project Overview

PocketSmart is an AI-powered app that helps users track spending, set budgets, and get personalized money-saving suggestions based on their spending habits.

3. Objective

To define and connect the full AI workflow, from user input to data processing, AI analysis, and insight delivery, so it works as one smooth system.

4. Work Steps

- 1 Collect user inputs such as expenses, income, and savings goals.
- 2 Clean and organize the data, and categorize each transaction.
- 3 Store the processed data in the database.
- 4 Connect the AI model using the API key from the environment.
- 5 Generate spending analysis, budget suggestions, and savings tips.
- 6 Display the insights and alerts on the user dashboard.
- 7 Add error handling so the app responds clearly when something goes wrong.
- 8 Test the complete workflow from input to output.

5. Main Parts of the Workflow

- User input and data collection
- Data processing and categorization
- Database storage
- AI integration and analysis
- Insight and alert generation
- Dashboard and user feedback
