

# PocketSmart – Configure Access and Permission

Member Assignment – Basila

## 1. Topic

Configuring access and permissions for PocketSmart

Epic: Access Control and Security

## 2. Project Overview

PocketSmart is an AI-powered app that helps users track spending, set budgets, and get personalized money-saving suggestions. Access and permission controls help ensure that users and application components can access only the resources required for their tasks.

## 3. Objective

To configure appropriate access permissions for PocketSmart users and application services, protect sensitive resources, and ensure that authorized users can perform the required actions safely.

## 4. Work Steps

- 1 Identify the users, roles, and application services that require access.
- 2 Define the resources and features that need protection.
- 3 Create suitable roles or permission groups for different types of users.
- 4 Assign only the permissions required for each role or service.
- 5 Configure access to PocketSmart application resources and backend services.
- 6 Protect sensitive financial and user-related information from unauthorized access.
- 7 Review authentication and authorization settings for the application.
- 8 Test authorized actions and verify that restricted actions are denied.
- 9 Review permissions regularly and remove unnecessary access.
- 10 Add logging and error handling to help monitor access-related problems.

## 5. Main Parts of the Setup

- User and service identification
- Role and permission configuration
- Resource access control
- Authentication and authorization
- Sensitive data protection
- Permission assignment
- Access testing
- Permission review and maintenance
- Access logging and monitoring
- Error handling for unauthorized requests

## 6. Expected Outcome

PocketSmart should have controlled access to its application resources, with users and services receiving only the permissions required for their tasks. Unauthorized access attempts should be restricted and identifiable through appropriate monitoring.

## 7. Key Benefits

- Protects PocketSmart resources from unauthorized access.
- Limits users and services to the permissions they actually need.
- Helps protect sensitive user and financial information.
- Makes access management easier to review and maintain.
- Improves application security through controlled authorization.
