

PocketSmart – Develop HTML Frontend Interface

Member Assignment – Basila

1. Topic

Developing the HTML frontend interface for PocketSmart

Epic: Frontend Interface Development

2. Project Overview

PocketSmart is an AI-powered app that helps users track spending, set budgets, and get personalized money-saving suggestions. The HTML frontend provides the user interface through which users can enter financial information, view budgets, and interact with the application's features.

3. Objective

To design and develop a clear, simple, and user-friendly HTML frontend interface for PocketSmart, including the main sections required for expense tracking, budgeting, and AI-powered financial suggestions.

4. Work Steps

- 1 Create the basic HTML structure for the PocketSmart frontend.
- 2 Design a clear navigation area for accessing the main application sections.
- 3 Create a dashboard to display important spending and budget information.
- 4 Add an expense input form for entering spending details.
- 5 Create budget-related sections to show budget limits and spending status.
- 6 Add an area for displaying AI-powered money-saving suggestions.
- 7 Use suitable buttons, input fields, headings, cards, and tables for user interaction.
- 8 Organize the page layout so that information is easy to understand and access.
- 9 Connect the frontend elements with the required backend/API endpoints when available.
- 10 Test the interface and fix HTML or layout issues.

5. Main Parts of the Setup

- HTML page structure
- Navigation and application layout
- PocketSmart dashboard
- Expense entry form
- Budget display section
- Spending summary section
- AI suggestion section
- Buttons, forms, cards, and tables
- Frontend and backend/API integration
- Interface testing and error handling

6. Expected Outcome

A functional and user-friendly HTML frontend interface for PocketSmart that allows users to navigate the application, enter expenses, view budget information, and access personalized financial suggestions.

7. Key Benefits

- Provides a simple interface for PocketSmart users.
- Makes expense and budget information easier to view.
- Improves navigation between application features.
- Provides a clear place for AI-generated financial suggestions.
- Creates a foundation for connecting the frontend with the backend.
